Fig. 6

Fig. 6 is a schematic diagram of an optical system. A light source 12c emits a beam of light that passes through a lens 32. The beam then passes through a circular component 10c, which is shaded with diagonal lines. The beam continues to pass through another lens 34, also shaded with diagonal lines, and finally forms an image on a screen 16c. The beam is represented by a cone of light rays originating from the source 12c.
